dhwaniPRO - Noise Modeling Software

envitrans is pleased to announce the release of dhwaniPRO an ambient air noise modeling application developed for the professionals working with environmental impact assessment of noise pollution scenarios. Noise modeling includes industrial and traffic noise.

By Envitrans Private Limited based in Ghaziabad, INDIA.

SoundPLANessential - Version 5.0 - Noise Modeling Software

SoundPLANessential 5.0 is the single document application for environmental noise planning of roads, railways and industrial facilities. Create noise contour maps in cities and open environment from basic 3D geometry and some traffic information or sound power data. It was conceived with the occasional user in mind who may not have in-depth ...

Canarina CUSTIC - Noise Pollution Modeling Software

CUSTIC is a software for Noise pollution modeling. The program calculates the noise level in each point of the space considering each one of the sources and the conditions of the atmosphere. The system of simulation of processes of dispersion that CUSTIC 3.2 has, offers to the beginner and the expert programmer, a quick and practical ...
